

p162 1-6, 12

$$\textcircled{1} \quad W = F s \cos \theta \\ = m g s = (256 \text{ kg})(9.81 \text{ ms}^{-2})(2.80 \text{ m}) = \underline{7030 \text{ J}}$$

$$\textcircled{2} \quad W = F s \cos \theta \\ = m g s = (65 \text{ kg})(9.81 \text{ ms}^{-2})(20.0 \text{ m}) = \underline{12800 \text{ J}}$$

(a) constant velocity, so $a = 0$
 $\Sigma F = 0$
 $F - F_f = 0$
 $F = F_f = 230 \text{ N}$

$$W = F s \cos \theta = (230 \text{ N})(4.0 \text{ m}) = \underline{920 \text{ J}}$$

(b) $\Sigma F = 0$
 $F_{\text{frict}} = F_g$
 $W = F s \cos \theta = (1300 \text{ N})(4.0 \text{ m}) = \underline{5200 \text{ J}}$

$$\textcircled{4} \quad F_f = \mu F_N = (0.50)(160 \text{ kg})(9.81 \text{ ms}^{-2}) = 785 \text{ N}$$

constant velocity, $a = 0$, $\Sigma F = 0$
therefore $F_{\text{movers}} = F_{\text{friction}}$

$$W = F s \cos \theta \\ = (785 \text{ N})(10.3 \text{ m}) \\ = \underline{8100 \text{ J}}$$

$$\textcircled{5} \quad W = F s \cos \theta$$

$$F = ma$$

$$F = (5 \text{ kg})(2 \text{ ms}^{-2})$$

$$F = 10. \text{ N}$$

$$a = 2.0 \text{ ms}^{-2}$$

$$t = 7.0 \text{ s}$$

$$u = 0$$

$$m = 5.0 \text{ kg}$$

$$s = ut + \frac{1}{2}at^2$$

$$= \frac{1}{2}(2.0 \text{ ms}^{-2})(7 \text{ s})^2$$

$$s = 49 \text{ m}$$

$$W = Fs = (10. \text{ N})(49 \text{ m}) = \underline{490 \text{ J}}$$

- $\textcircled{6}$ Book 1 : no work (it starts the pile)
 Book 2 : raised 0.043 m
 Book 3 : raised 0.043 m $\times 2 = 0.086 \text{ m}$
 \vdots
 Book 8 : raised 0.043 m $\times 7$

So...

$$\begin{aligned} \sum W &= W_1 + W_2 + W_3 + \dots + W_8 \\ &= Fs_1 + Fs_2 + \dots + Fs_8 \\ &= F(s_1 + s_2 + s_3 + \dots + s_8) \quad s_1 = 0 \\ &= F(0.043 \text{ m} + (0.043 \text{ m})2 + (0.043)3 + \dots + (0.043)7) \\ &= F(0.043 \text{ m})(1 + 2 + 3 + 4 + 5 + 6 + 7) \\ &= mg(0.043 \text{ m})(28) \end{aligned}$$

$$= (1.7 \text{ kg})(9.81 \text{ ms}^{-2})(0.043 \text{ m})(28)$$

$$W = \underline{20. \text{ J}}$$

$$\textcircled{12} \text{ (a)} \quad W = \text{Area}$$

$$= \frac{(400)(3)}{2} + (400)(4) + \frac{400(3)}{2}$$

$$= 2800 \text{ J}$$

$$\text{(b)} \quad W = \text{Area}$$

$$= \frac{(-200)(2)}{2} + (-200)(1.5) + \frac{(-200)(1.5)}{2} = -650 \text{ J}$$

$$W = 2800 \text{ J} - 650 \text{ J} = \underline{2150 \text{ J}}$$
