## Solubility Curves Worksheet

1. Using a solubility curve, determine the amount of each solute that can dissolve in 100 g of water at the given temperature
(a) $\mathrm{KNO}_{3}$ at $70^{\circ} \mathrm{C}$
(f) $\mathrm{KClO}_{3}$ at $65^{\circ} \mathrm{C}$
(b) $\mathrm{NH}_{4} \mathrm{Cl}$ at $90^{\circ} \mathrm{C}$
(g) $\mathrm{NH}_{4} \mathrm{Cl}$ at $65^{\circ} \mathrm{C}$
(c) NaCl at $100^{\circ} \mathrm{C}$
(d) $\mathrm{NaNO}_{3}$ at $35^{\circ} \mathrm{C}$
(h) $\mathrm{NaNO}_{3}$ at $70^{\circ} \mathrm{C}$
(e) $\mathrm{NH}_{3}$ at $20^{\circ} \mathrm{C}$
(i) $\mathrm{KNO}_{3}$ at $10^{\circ} \mathrm{C}$
(j) $\mathrm{Ce}_{2}\left(\mathrm{SO}_{4}\right)_{3}$ at $15^{\circ} \mathrm{C}$
2. Solubility data for four different salts in water at $60^{\circ} \mathrm{C}$ are shown in the table below.

| Salt | Solubility in Water at $60^{\circ} \mathrm{C}$ |
| :---: | :---: |
| A | $10 \mathrm{~g} / 50 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$ |
| B | $20 \mathrm{~g} / 60 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$ |
| C | $30 / 120 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$ |
| D | $40 \mathrm{~g} / 80 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$ |

Which salt is most soluble at $60^{\circ} \mathrm{C}$ ?
3. When cola, a type of soda pop, is manufactured, $\mathrm{CO}_{2}(\mathrm{~g})$ is dissolved in it.
(a) A capped bottle of cola contains $\mathrm{CO}_{2}(\mathrm{~g})$ under high pressure. When the cap is removed, how does pressure affect the solubility of the dissolved $\mathrm{CO}_{2}(\mathrm{~g})$ ?
(b) A glass of cold cola is left to stand 5 minutes at room temperature. How does temperature affect the solubility of the $\mathrm{CO}_{2}(\mathrm{~g})$ ?
4. A student uses 200 grams of water at a temperature of $60^{\circ} \mathrm{C}$ to prepare a saturated solution of potassium chloride, KCl .
(a) Identify the solute in this solution.
(b) How many grams of KCl must be used to create this saturated solution?
(c) This solution is cooled to $10^{\circ} \mathrm{C}$ and the excess KCl precipitates (settles out). The resulting solution is saturated at $10^{\circ} \mathrm{C}$. How many grams of KCl precipitated out of the original solution?
5. Two alcohols that are used in our everyday lives are rubbing alcohol and ethylene glycol. Rubbing alcohol is used as an antiseptic. Ethylene glycol is the main ingredient in antifreeze, which is used in automobile cooling systems. Explain, in terms of molecular polarity, why rubbing alcohol, 2-propanol, is soluble in water.
6. The following data table shows the solubility of a solid solute.

| Temperature $\left({ }^{\circ} \mathrm{C}\right)$ | Solute $/ 100 \mathrm{~g}$ of $\mathrm{H}_{2} \mathrm{O}$ |
| :---: | :---: |
| 0 | 18 |
| 20 | 20 |
| 40 | 24 |
| 60 | 29 |
| 80 | 39 |
| 100 | 49 |

(a) Graph the data from the data table. Connect the points.
(b) Based on the data table, if 15 grams of solute is dissolved in 100 grams of water at $40^{\circ} \mathrm{C}$, how many more grams of solute can be dissolved in this solution to make it saturated at $40^{\circ} \mathrm{C}$ ?
(c) How many grams of $\mathrm{KClO}_{3}$ must be dissolved in 100 grams of $\mathrm{H}_{2} \mathrm{O}$ at $10^{\circ} \mathrm{C}$ to produce a saturated solution?
7. A saturated solution of $\mathrm{NaNO}_{3}$ is prepared at $60 .{ }^{\circ} \mathrm{C}$ using 100 . grams of water. As this solution is cooled to $10 .{ }^{\circ} \mathrm{C}, \mathrm{NaNO}_{3}$ precipitates (settles) out of the solution. The resulting solution is saturated. Approximately how many grams of $\mathrm{NaNO}_{3}$ settled out of the original solution?
8. An unsaturated aqueous solution of $\mathrm{NH}_{3}$ is at $90 .{ }^{\circ} \mathrm{C}$ in 100 . grams of water. How many grams of $\mathrm{NH}_{3}$ could this unsaturated solution contain?
