Name: $\qquad$
Physics: Vector Addition Worksheet I
Date: $\qquad$ Period: $\qquad$

## Part I:

Find the $x$ and $y$ components of each of the following vectors.

$\mathrm{X}=$ $\qquad$
$y=$ $\qquad$
$x=$ $\qquad$

$\mathrm{X}=$ $\qquad$
$y=$ $\qquad$
Add the following vectors.

$\qquad$ $+\quad \mathrm{x}_{2}=$ $\qquad$
$=\quad X_{\text {tot }}=$ $\qquad$
$\mathrm{y}_{1}=$ $\qquad$

$\qquad$
$\mathrm{y}_{1}=$
$+$
$\mathrm{x}_{2}=$ $\qquad$
$=\quad \mathrm{x}_{\mathrm{tot}}=$ $\qquad$
$=\quad \mathrm{y}_{\mathrm{tot}}=$ $\qquad$

Add the following vectors and draw the resultant.

For each of the following questions, draw a picture representing what is happening and then answer the question. Be sure that your picture and your answer show the same thing.

1. You travel 25 meters east and then travel 48 meters south. What is your total displacement?
2. During his first golf tournament (at age 2), Tiger Woods actually had to four-putt one of the holes (meaning he had to putt the ball four times before it went in!). His putts were as follows: 10 meters southwest, 3 meters north, 4 meters southeast, and 0.5 meters west. How far was the hole from his original putting position? In what direction?
3. The designated course for a 6 kilometer road race has the runners going 4.5 km west and then 1.5 km north, where the finish line is located. A less-than-honest contestant in the race runs 2.5 km west and then decides to head straight toward the finish line. What distance does this wanna-be actually cover during his race?
