---

### Synthesis Reaction

- Two or more reactants combine to produce a new product.

Images: mycutegraphics.com

---

---

---

---

---

---

A                      B

$$A + B \rightarrow AB$$
$$\text{Zn(s)} + \text{S(s)} \rightarrow \text{ZnS(s)}$$
$$\text{N}_2(\text{g}) + \text{O}_2(\text{g}) \rightarrow 2\text{NO(g)}$$
$$2\text{H}_2(\text{g}) + \text{O}_2(\text{g}) \rightarrow 2\text{H}_2\text{O(l)}$$

---

---

---

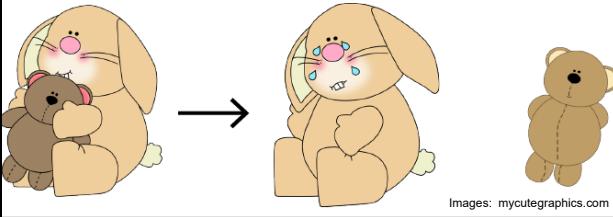

---

---

---

## Decomposition Reaction

- A compound breaks down into two or more compounds or elements.

---

---

---

---

---

---

---

---

---

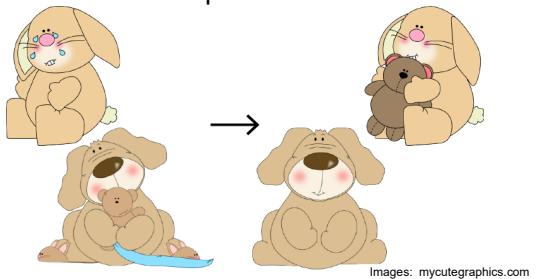

---

---

---

## Single Replacement Reaction or Single Displacement Reaction

- A single element replaces or displaces an element in a compound.

---

---

---

---

---

---

A

B C

or

---

---

---

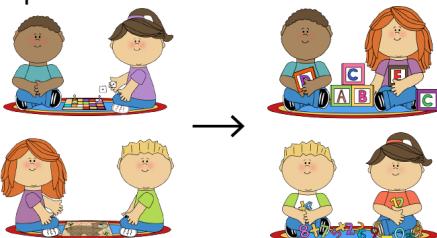

---

---

---

## Double Replacement Reaction or Double Displacement Reaction

- The cations of two different compounds exchange places, forming two new compounds.

---

---

---

---

---

---

A B

C D

or

---

---

---

---

---

---

## Combustion Reaction

- A compound with carbon and hydrogen reacts with oxygen to produce carbon dioxide ( $\text{CO}_2$ ) and water ( $\text{H}_2\text{O}$ ).

---

---

---

---

---

---

- The products of a combustion reaction are ALWAYS carbon dioxide and water.

---

---

---

---

---

---

## Summary

Reaction Type	Form
Synthesis	$\text{A} + \text{B} \rightarrow \text{AB}$
Decomposition	$\text{AB} \rightarrow \text{A} + \text{B}$
Single Replacement/Displacement	$\text{A} + \text{BC} \rightarrow \text{B} + \text{AC}$
Double Replacement/Displacement	$\text{AB} + \text{CD} \rightarrow \text{AD} + \text{CB}$
Combustion	$\text{C}_x\text{H}_x + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$
